

ARC for Business Intelligence Users

Features of ARC MIS PDP

Extend ERP application security to other applications without having to rewrite any access control rules

ARC MIS PDP
Extending ERP
Security

Extend ERP application security to even users not defined in ERP application using applications like Crystal Reports

Extend ERP application security while ensuring legal (SOX/HIPPA) and corporate security compliance

ARC MIS PDP is the only high performance database firewall that gives ERP users fast and easy access to all the data they need inside or outside of the ERP application while ensuring that they cannot access unauthorized data.

All this is possible using the ERP Security Metadata Adapter without having to re-key information or develop custom programs.
